Deploying your 32 bit application with the IPP DLLs	
Deploying your 64 bit application	15

Installation

PlotLab comes with an installation program. Just start the installation by double-clicking on the Setup.exe file and follow the installation instructions.

Where is PlotLab?

After the installation PlotLab is located under a single root directory. The default location is C:\Program Files\LabPacks or C:\Program Files (x86)\LabPacks on 64 bit systems. During the installation the user has the option to select alternative directory. Here is how the directory structure should look like after the installation:

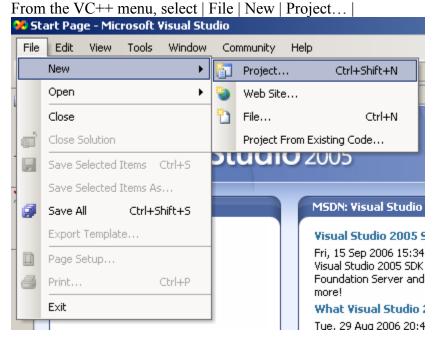

Under the "Demos" directory are located the demo files. The help files and the documentation are located under the "Help" directory. The component .NET 2.0/3.5/4.0 assemblies and the redistributable DLL files are located under the "Bin" directory. It is a great idea to start by opening and compiling the demo files. The demo projects ware developed with Visual C# 2005.

Creating a new PlotLab project in Visual C#

All of the examples in this manual start with creating a C# Windows .NET based project. The following chapters will assume that you have created the project and will teach you how to add specific PlotLab functionality.

Start by creating a new project.

In the "New Project" dialog select | Visual C# | Windows Application | Optionally you can select a project path and project name:

			? ×
	Templates:		00 00 00 00 00
e /pes	Windows Application Windows Control Library Console Application Empty Project	달린 Class Library 달란 Web Control Library 당한 Windows Service 달란 Crystal Reports Applical	tion
ng an application with	n a Windows user interface		
WindowsApplication	1		
C:\Documents and	Settings\Boian Mitov\My Document	s\Visual Studio 2005\Projects	▼ <u>B</u> rowse
WindowsApplication	1	Create directory for solution	
			Cancel
	rpes ng an application with WindowsApplication C:\Documents and	Pres Windows Application Windows Control Library Console Application Project Search Online Templates Pres Mindows user interface Windows Application 1	Image: Search Online Templates rpes Image: Search Online Templates Imag

Click OK.

Installing the components on the Toolbox

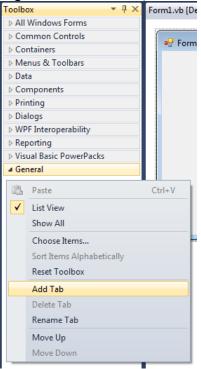

Before using the components in your project, you will have to install them on the component Toolbox.

The install in version 3.1 and up will automatically install the components on the toolbar, however if it fails, or if you have selected not to do so during the installation, here is a way to install the components manually:

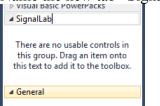

We assume that you have already created a project, and the toolbox with the .NET components has appeared.

Open the component toolbox and expand the General section.

Right-click and select |Add Tab| from the menu:

Name the new tab "SignalLab":

Right-click on the SignalLab tab and select |Choose Items...| from the menu:

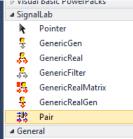

⊿ Sig	nalLab	
1	Paste	Ctrl+V
\checkmark	List View	
	Show All	
	Choose Items	
	Sort Items Alphabetically	
	Reset Toolbox	
	Add Tab	
	Delete Tab	
	Rename Tab	
	Move Up	
	Move Down	

In the "Choose Toolbox Items" dialog select the components that belong to the Mitov.SignalLabBasic.DLL (You can order the components by "Assembly Name"). Press the "Spacebar" key to make sure all the components are selected:

Silverlight Componer	nts Sy:	stem.Workflow Components	System.Activiti	ies Components
.NET Framework C	Components	COM Component	ts WPF	Components
Name	Namespace		Assembly Name	Directory
✓ GenericFilter	Mitov.Signall	Lab	Mitov.SignalLabBasic	Global Asse
🗸 GenericGen	Mitov.Signall	Lab	Mitov.SignalLabBasic	Global Asse
🖉 GenericReal	Mitov.Signall	Lab	Mitov.SignalLabBasic	Global Asse
🖉 GenericRealGen	Mitov.Signall	Lab	Mitov.SignalLabBasic	Global Asse
🖉 GenericRealMatrix	Mitov.Signall	Lab	Mitov.SignalLabBasic	Global Asse
📝 Pair	Mitov.Signall	Lab	Mitov.SignalLabBasic	Global Asse
BackgroundWorker	System.Com	ponentModel	System	Global Asse
Component	System.Com	ponentModel	System	Global Asse
🗸 EventLog	System.Diagr	nostics	System	Global Asse
FileSystemWatcher	System.IO		System	Global Asse
MarchalD://aluaCom	Surton Com	nonontModel III	Curtom	Global Acco
ilter:				<u>C</u> lear
GenericFilter Shanguage:	Invariant Langua	ge (Invariant Country)		Browse

Click OK.

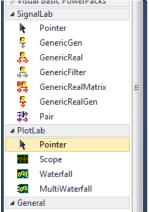

You should see the SignalLabBasic components on your toolbox:

Close and restart the Visual Studio IDE, then reopen the project.

Repeat the same steps to install the components from the Mitov.PlotLabBasic.DLL, and Mitov.PlotLab.DLL assemblies.

You should see the SignalLabBasic and PlotLab components on your toolbox:

Now you can start using them in your .NET development.

Adding the necessary assembly references to your application

Visual studio will automatically add the assemblies being referenced when adding components to the project. If this mechanism fails, you can manually add the necessary assemblies as shown here:

In the "Solution Explorer" select the "References" node and right-click on it. From the menu select |Add Reference...|

Navigate to the Select the Mitov.PlotLabBasic.dll from the LabPacks\Bin\2.0 subdirectory and add the necessary assemblies.

Here is the list of necessary assemblies:

- For Mitov.BasicLab.DLL None.
- For Mitov.SignalLabBasic.DLL: a. Mitov.BasicLab.DLL
- For Mitov.PlotLabBasic.DLL:
 - a. Mitov.BasicLab.DLL
- For Mitov.PlotLab.DLL:
 - a. Mitov.PlotLabBasic.DLL
 - b. Mitov.BasicLab.DLL

Creating a simple Scope application

Create and setup a new project as described in the "Creating a new PlotLab project in Visual C#" chapter.

From the "Toolbox" select the "Scope" component:

D (rystal keports
Ξ.	PlotLab
k	Pointer
144	Scope
0 91)	Waterfall
0	MultiWaterfall

🛃 Form1 - I × Scope 1000 – 800 -600 -400 -200 -X 0 --200 --400 --600 --800 --1000 -0 400 500 Samples 1000 100 300 200 600 700 800 900

Place the component on the form and arrange it as shown here:

In the "Properties" palette set the Anchor property as shown here:

⊡	Layout	
	Anchor	Top, Left 🔹
	Dock	
Ð	Location	
Ð	Margin	
Ð	MaximumSize	
Ŧ	MinimumSize	
	Daddiaa	

In the "Properties" palette go to the "Channels" property and click on the "…" button:

	Misc	
	Channels	(Collection)
	CursorLinks	(Collection)
	Cursors	(Collection)
Ð	DataView	Mitov.PlotLab.9
F	Hiabliabtina	Mitov Ploti ah f

In the "ScopeChannel Collection Editor" add 2 channels by clicking twice on the "Add" button:

ScopeChannel Collection Editor				3	×
Members:		Ch	annel1 properties:		
0 Channel0 1 Channel1	+	•	2↓ 🖻		
I Channell	¥		Misc		
			ChannelMode	Line	
			Color	0, 255, 0	
			Index	1	_
			Markers	(Collection)	
			Name	Channel1	
		Ð	Points	Mitov.PlotLab.Scop	el
			ShadeMode	Zero	
			Visible	True	
			Width	1	
<u>A</u> dd <u>R</u> emove					
			0	K Cancel]
					_///

Select the first channel and rename it to "Random" as shown in the picture:

ScopeChannel Collection Editor			? ×
Members: 0 Random 1 Channel1	 ▲ ▲ ■ 	Andom properties: Misc ChannelMode Color Index Markers Name Points ShadeMode Visible Width	Line 255, 0, 0 0 (Collection) Random Mitov.PlotLab.Scope Zero True 1
<u>A</u> dd <u>R</u> emove		c	K Cancel

Select the second channel and rename it to "Ramp" as shown in the picture:

Members: Ramp groperties: □ Random Image: ChannelMode Line □ Ramp Image: ChannelMode Line □ Color Image: One Color □ Index 1 Markers (Collection) Name Ramp Image: Points Mitov.PlotLate ShadeMode Zero Visible True Width 1	?
1 Ramp I Ramp I Ramp I Ramp I Ramp I Misc ChannelMode Line Color I ndex 1 Markers (Collection) Name Ramp Points Mitov.PlotLa ShadeMode Visible	
Color 10,255,0 Index 1 Markers (Collection) Name Ramp Points Mitov.Plot.a ShadeMode Zero Visible True	
Index 1 Markers (Collection) Name Ramp Points Mitov.PlotLa ShadeMode Zero Visible True	
Markers (Collection) Name Ramp Points Mitov.Plot.a ShadeMode Zero Visible True	
Name Ramp Points Mitov.PlotLa ShadeMode Zero Visible True	
Points Mitov.PlotLa ShadeMode Zero Visible True	
ShadeMode Zero Visible True	
Visible True	b.Scopel
Width 1	
Add Remove	
ОК	ncel

Click the "OK" button.

From the "Toolbox" switch to the "Components" group and select the "Timer" component:

<u>Place it on the form.</u> It will appear bellow the form area:

In the "Properties" palette set the Enabled property to True:

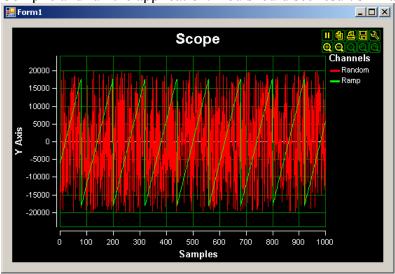

Properties	- ₽ ×
timer1 System.W	'indows.Forms.Time 🝷
₽ 2↓ 🗉 🖋	
🗆 Behavior	
Enabled	True 🔹
Interval	100

Double-click on the timer1 component, and add the highlighted lines in the source file:

usıng	System;
using	System.Collections.Generic;
using	System.ComponentModel;
using	System.Data;
using	System.Drawing;
using	System.Text;
using	System.Windows.Forms;

namespace WindowsApplication1

```
{
    public partial class Form1 : Form
    {
        public Form1()
        {
            InitializeComponent();
        }
        private void timer1_Tick(object sender, EventArgs e)
        {
            double[] Buffer1 = new double[1000];
            double[] Buffer2 = new double[1000];
            for (int i = 0; i < 1000; i++)</pre>
            {
                Buffer1[i] = m_RandomGen.NextDouble() * 40000 -
20000;
                Buffer2[i] = (m Counter % 120) * 300 - 18000;
                m Counter++;
            }
            scope1.Channels[0].Data.SetYData(Buffer1);
            scope1.Channels[1].Data.SetYData(Buffer2);
        }
        private Random m RandomGen = new Random(123);
        private int m Counter = 0;
    }
```

Compile and run the application. You should see result similar to this one:

Congratulations! You have just created your first PlotLab application.

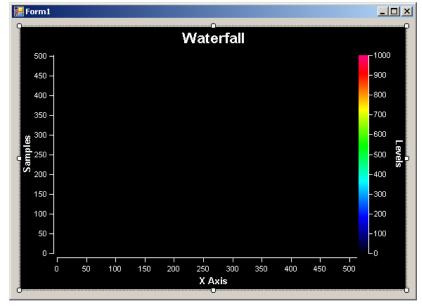

Creating a simple Waterfall application

Create and setup a new project as described in the "Creating a new PlotLab project in Visual C#" chapter.

From the "Toolbox" select the "Waterfall" component:

🗄 Crystal Reports	
🗉 PlotLab	
Revinter	
Scope	
👯 Waterfall	
🥶 MultiWaterfall	

Place the component on the form and arrange it as shown here:

In the "Properties" palette set the Anchor property as shown here:

From the "Toolbox" switch to the "Components" group and select the "Timer" component:

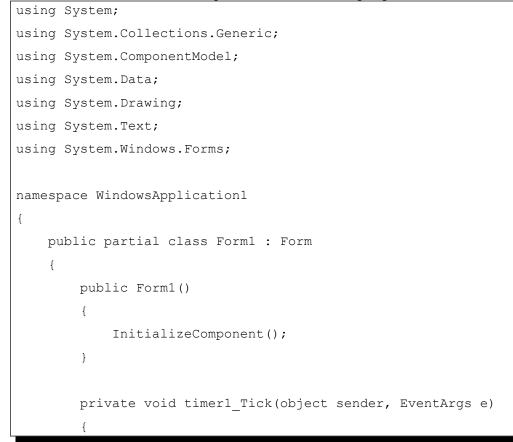

Place it on the form. It will appear bellow the form area:

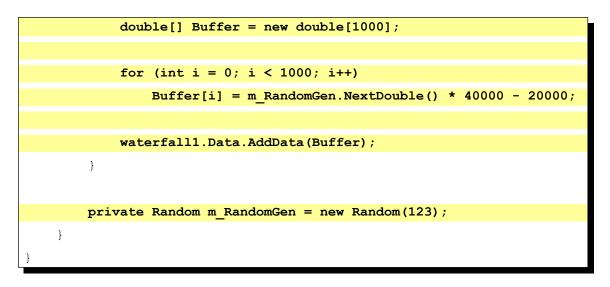

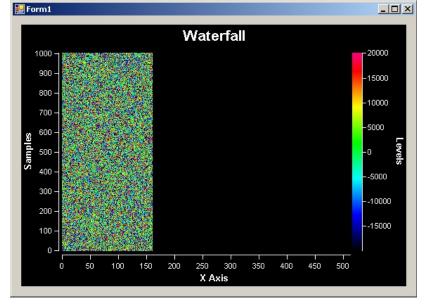

In the "Properties" palette set the Enabled property to True:

Properties	+ ₽ ×
timer1 System.\	Windows.Forms.Time 🝷
<u>₽</u> 2↓ 💷 🦻	
🗆 Behavior	
Enabled	True 💽
Interval	100

Double-click on the timer1 component, and add the highlighted lines in the source file:

Compile and run the application. You should see result similar to this one:

You have learned how to use the Waterfall component from inside your .NET application.

Distributing your application

Once you have finished the development of your application you most likely will need to distribute it to other systems. Version 5.0.2 and higher of the library will move all the necessary DLL files in the Release directory of your project. You will only need to distribute the files in the directory. To use this feature, make sure that the "Copy Local" property is set for all the assemblies from the library. Please check with the Visual Studio help for your version of Video Studio on how to configure assemblies as private assemblies.

Deploying your 32 bit application with the IPP DLLs

The compiled applications can be deployed to the target system by simply copying the executable. The application will work, however the performance can be improved by also copying the Intel IPP DLLs provided with the library.

November 13, 2014

The DLLs are under the [install path]\LabPacks\IppDLL\Win32 directory([install path] is the location where the library was installed).

In 32 bit Windows to deploy IPP, copy the files to the [Windows]\System32 directory on the target system.

In 64 bit Windows to deploy IPP, copy the files to the [Windows]\SysWOW64 directory on the target system.

[Windows] is the Windows directory - usually C:\WINNT or C:\WINDOWS This will improve the performance of your application on the target system.

Deploying your 64 bit application

The current version of the library requires when deploying 64 bit applications, the Intel IPP DLLs to be deployed as well.

The DLLs are under the [install path]\LabPacks\IppDLL\Win64 directory([install path] is the location where the library was installed).

To deploy IPP, copy the files to the [Windows]\System32 directory on the target system. [Windows] is the Windows directory - usually C:\WINNT or C:\WINDOWS This will improve the performance of your application on the target system.
